

Adenium obesum

DESERT ROSE

A tropical shrub known for its longevity and resistance to dry conditions. Thick short branches arranged in spirals around stout trunk, leathery leaves form clusters at ends of branches. Bell shaped blooms appear year round.

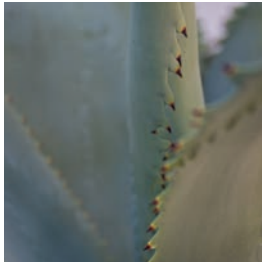

Color: Pink, red, white, or yellow
blooming hybrids available

Aeonium

Striking group whose succulent leaves are predominately V-shaped, forming rosettes at end of stems.

Color: Yellow bloom, green, pink, red, purple, black or variegated foliage

Agave

Bold structured plants. Wide ranging leaves in width, color and texture some bearing spines on margins and tips.

Color: Green, blue, gray, or yellow to white variegated foliage

Aloe

Waxy leaved, may be toothed, in an array of shapes and ranging in size from miniature to large forty foot tree.

Color: Orange, white, blush blooms.
Green, blue, pink, orange, red and near black foliage

Cephalocereus senilis

OLD MAN CACTUS

A columnar plant with white hair-like spines.

Color: Green plant with white overcoat

Cereus repandus

MONSTROSE APPLE CACTUS

Fast growing, heavily branching stems of this cacti to fifteen feet.

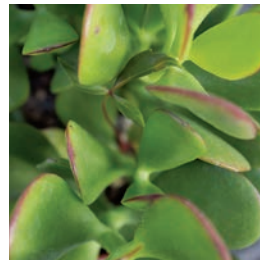

Color: White bloom, blue-gray foliage

Cotyledon

A shrubby succulent genus with vast differences in appearance. Multiple leaf shapes and textures, some with a variegated edge.

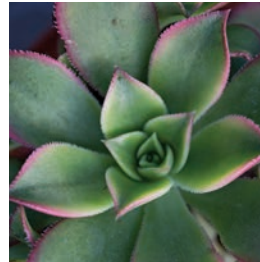

Color: Green or blue foliage, with variegated or edged accents

Crassula

A group differing greatly in size, shape and color. Upright and trailing forms may have triangular, thick, flat, or lance leaves.

Color: White, pink, or red blooms.
Green, grey, red, or spotted foliage

Echevaria

A group valued for amazing diversity in the rosettes.

Color: Red, orange, yellow, apricot, or pink blooms. Green, gray, blue, pink, red, or yellow foliage

Echinocactus grusonii

GOLDEN BARREL CACTUS

Round, spiky plants can grow to thirty-six inches in diameter.

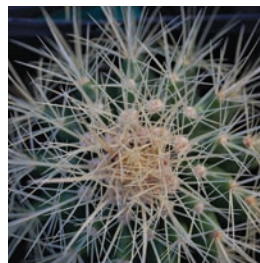

Color: Green plant with yellow spikes

Euphorbia

Ranging from low growing succulents to large non-succulent shrubs and cacti. Bearing flattened leaves, thick cactus-like heavily ridged stems, branching columns or dense masses of branching stems. Many have spines along ridges or stems and may be tinged with pink.

Color: Yellow, red, or orange blooms, green, blue, or mottled foliage

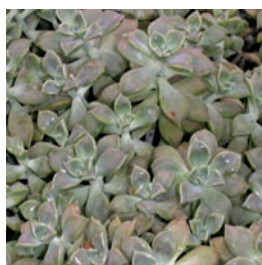

Ferocactus

BARREL CACTUS

Covered with recurving spines in yellow or red, some have a depressed globular form, others become cylindrical over time.

Color: Violet, yellow, or red blooms, blue or green foliage

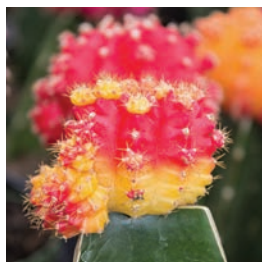

Graptopetalum

A low growing plant whose leaves range from plump, flattened, triangular to arching. Most form rosettes and a few are low shrub like.

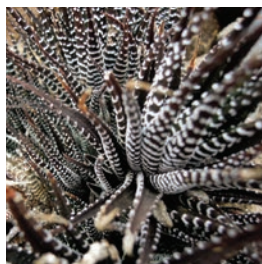

Color: White or pink blooms, silver-gray, pink, to waxy-green foliage

Gymnocalycium

Interesting cacti which includes the popular and colorful grafted 'Moon Cactus'.

Color: White, pink, wine, chartreuse, or yellow blooms. Green, blue, gray, or purple foliage

Haworthia

Thick fleshy leaves some flattened may have deep veins, some with fine toothed margins and tips, or be covered in white hairs. White dots or striped markings add striking appearance.

Color: White blooms, deep, bright and pale green foliage

Hoya

Subtropical vine with either smooth or contorted leaves.

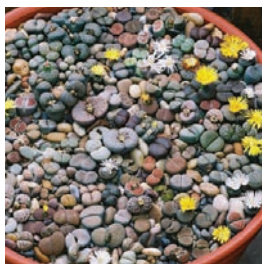

Color: White, pink, yellow, orange, red, or green blooms. Green, variegated cream and pink or mottled foliage

Kalanchoe

Large group with considerable choices in color, leaves and form. May have irregular lobes, toothed margins and fine hairs, or flat smooth leaves. Some develop pink hue or vivid red in sun.

Color: Pink, orange, or crimson blooms. Bright green, blue-green, silver-gray, pink, flecked, or red-edged foliage

Lithops

LIVING STONES

A tiny succulent with myriad distinguished shapes, patterns and overlays.

Color: Yellow or white blooms. Tan, brown, gray, green, reddish brown, or purplish foliage

Mammillaria elongata cristata

BRAIN CACTUS

Forms undulating fanned stems covered in dense spines.

Color: Green plant with gold or copper-orange spines

Opuntia

PRICKLY PEAR

Flattened stems known as pads or ears are dotted with small tufts of glochids in gold, cinnamon, copper or white.

Color: Pink, yellow, magenta or red blooms. Green, lime, blue or gray foliage

Pachypodium lamerei

MADAGASCAR PALM

Most common member of genus, this is a group of spine bearing trees and shrubs with pachycaul trunks. Spine covered stem with leaves mainly at top.

Color: White bloom with green foliage

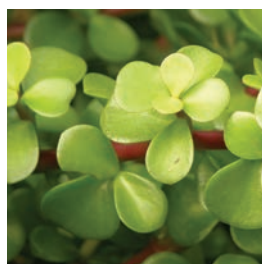

Pedilanthus

DEVIL'S BACKBONE

Succulent zig-zag ribbed stems give a striking appearance to this plant.

Color: Coral pink or carmine bloom. Green, variegated white, or pink blush in cool weather foliage

Portulacaria

ELEPHANT BUSH

A small genus of one species with various forms. Most are upright with red stems, or prostrate with variegated leaves. Twisted shape with age.

Color: Pink bloom, green or variegated white foliage

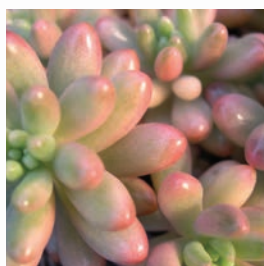

Rhipsalis

An epiphytic cactus that forms pendulous segmented stems, either slender pencil like or flattened.

Color: Green, lime, blue, gray foliage. White, pink, chartreuse, red, orange or yellow bloom

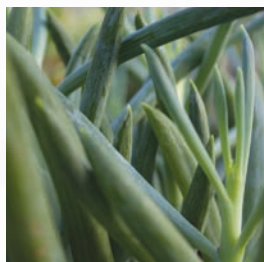

Sedum

A large group with variance in height, color and shape. May be matt-forming dense ground covers, mounds, or upright shrubs.

Color: Green, silver, gray, yellow, or variegated foliage

Senecio

Genus of succulents which have cylindrical, flat, or round leaves forming a dense matt, cascading mound, or in some cases a shrub form.

Color: White, yellow, red, or purple bloom, silver, blue, green, purple foliage
